7.Write a trigger to update Account's Name and Description when it is restored from recycle bin with **Account name + Restored** and for description **Account has been restored.**

Object : Account

```
Trigger AccountTrigger on Account (After Undelete)
{
   If (Trigger. IsAfter && Trigger. IsUndelete)
   {
      AccountTriggerHandler. HandlerAfterUndelete (Trigger. New)
      //Calling Handlerclass to execute the trigger....
   }
}
```

SWIPE TO SEE HANDLERCLASS........

```
Public class AccountTriggerHandler
{
  Public static void HandlerAfterUndelete (List<Account>Acclist)
  {
      List<Account>RestoreAcc = new list<Account> ();
      List<id>accid = new list<id> ();

    For (Account A: Acclist)
       {
         accid.add(A.id);
       }
    If(!accid.isEmpty())
     {
      List<Account>ExAcc = [Select id,name,description from Account where id =:accid];

       For (Account A : ExAcc)
         {
           A. Name = A. Name +' '+'Restored';
           A.Description = 'Account Has been restored';
           RestoreAcc.add (A);
         }
     }
    If (!RestoreAcc.isEmpty())
     {
       Update RestoreAcc;
     }
  }
}                        To See Result……….
```
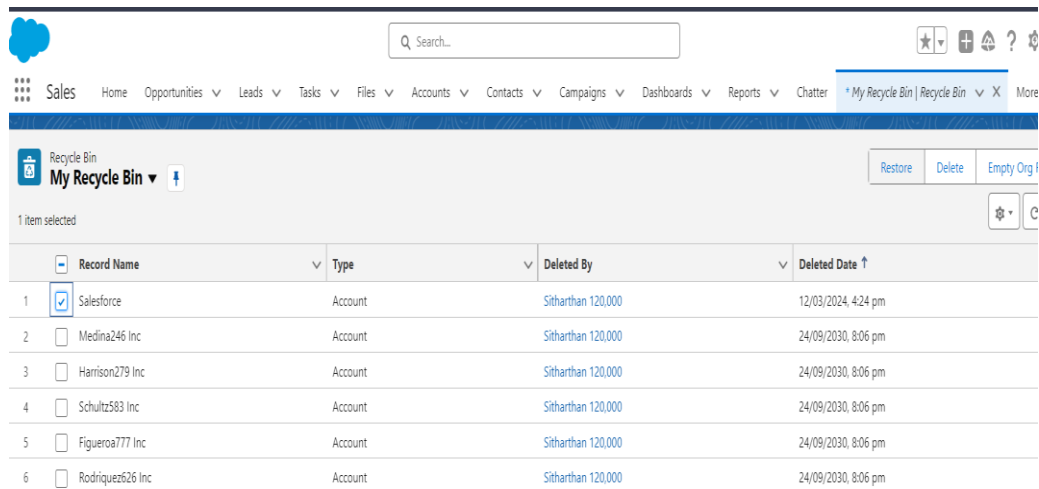

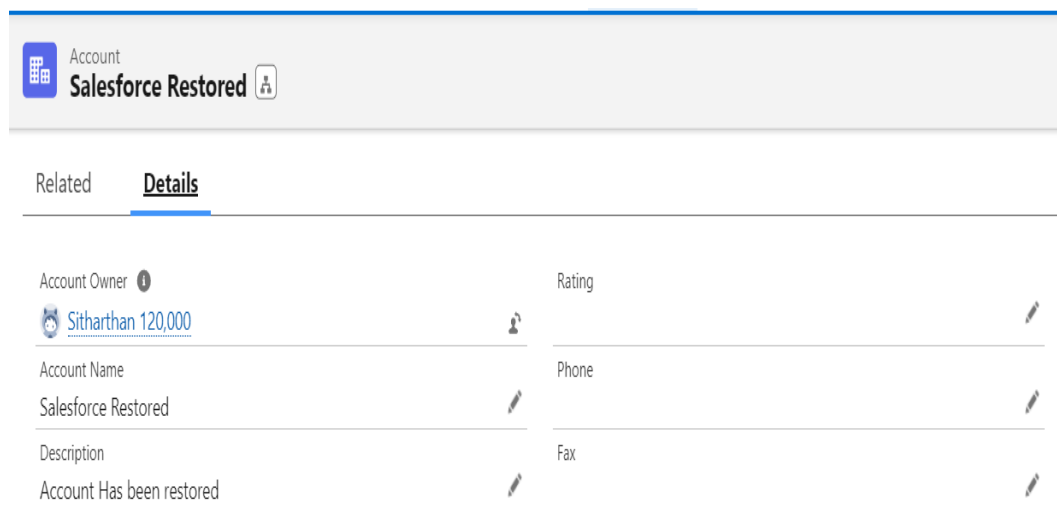

Restoring the Account from Recycle Bin.………
